ABOUT ME

I started my career as a web developer since 2014 as a thesis freelancer. When I entered the 2nd semester towards the 3rd semester of college, I participated in a web development competition at a state university in Palembang and and won the second place in the national level competition. later on, gaining a recognition from my participation as student ,one of our collage profressors asking me to to help others student with their project assigment.

I've worked on hundreds of projects but haven't made it to the international level due to my limited socialism, however, I do occasionally contribute to open source projects on github. For now I only handle local projects with the following scope: thesis, lecturer research, university, regional and national.
